

Tangible Gladiator

Tangible: Hard Money, Old Money, Aristocrat and Elite, Controlled Servitude minus severe austerity measure (limited time duration).

In short, tangible money would be that money of the wage earners gross income derived from GDP operations plus gross profits from (Old/Modern - GDP) industry.

Disposable profits from the seller of raw materials to industry would be included in the tangible pool.

Disposable profits from those landowner selling rights to raw material would also be included in the tangible pool.

Money derived from Tangible GDP is all the money that is available to the world. This is the limited amount of Hard Money that governments can rely upon to support a government.

Fiscal Policy addressing these areas would aid in making a countries Hard Money deficit sustainable.

So long as banking operated within the Hard Money, austerity measure and forwarding deficit to the next generation could possibly result in a positively adjusted environment.

Intangible: Soft Money, New Money, Traders, Hedgers, Stock Markets of the world. (Those who skim money from Tangible Value)

High speed trading allows for a mass amount of tangible stock to be bought and sold where the fees for these intangible trades are skimmed from Tangible Value.

Once Intangible value exceeds Tangible value, failure is eminent and failure did occur and most call it a financial crisis.

The Central Banks effort to save the Old Money banks, but these banks had become so involved in New Money; no amount of Hard or Soft Liquidity would serve to save Old Money banks for Hard Money limit is the value of GDP.

The Old Hard Money banks being so entwined with Soft Money (binary digits residing on the central banks computers) suffered loss in attempting to save the Soft Money of the trading markets.

Where as Hard Money value for centuries has risen at about 3% per annum, Soft Money Value in the last decade has risen at rates tenfold to that of Hard Money.

So were it that only Hard Money (Tangible) required fiscal policy, years or decades might have absorbed the kicking of the can, potentially sustainable. As for Soft Money (Intangible), to kick the Soft Money can down the road, would require that of centuries with future Soft Money exposure being added to the current Soft Money crisis, this scenario is absolutely unsustainable.

Of Course, you will have those whose lives depend upon the Soft Money doing whatever it takes to protect their Soft Money Friday Paycheck or Throne.

Emperor Honorius banned gladiatorial games around 404 AD. History notes that Rome felt fear in 73 BC that the city was about to be attacked.¹

Today's financial crisis affects the world and it is not just a city or government that should be concerned, but that of all cities and governments of the world. The governments of the world so far have not appeared to act in the best interest of humanity.

One needs not a sword to remove one from governmental office.

**Those not being subservient to mammon, who hold
office is one who those not elected fear.**

Choose Wisely!
