

Rating Agencies

Congress & Federal Reserve Bank of New York

The Federal Reserve Bank of New York in May 2010¹ released a Staff Report Study into MBS Ratings and the Credit Rating Agencies' mistakes. The report alludes to various issues as possible causes of today's financial fiasco.

The White House and Congress slam blasted British Petroleum for finger pointing and were highly upset that British Petroleum would not step up to the podium and accept responsibility. The American people may live in Podunk, USA but the American people are not a bunch of dumb clucks. The American People have faith in this great nation but not in those that are leading it to collapse.

Washington & Congress need to wake up. The American people know that mainstream media does not release information that correctly reports certain facts.

The financial institutions wanted the electronic world to execute their electronic transactions in nanoseconds; at the same time the American people came to be electronic proficient. The lack of trust of mainstream media has forced the American people to resort to the internet to find the facts.

Practice What You Preach

The writer has already offered up proof that the Federal Reserve Bank of New York knew Electronic Promissory Notes should be treated as a Rabid Cow.

The rating agencies were provided electronic copies, the AIG's of the world relied upon electronic copies; it appears that about every entity including the courts relied upon electronic copies. Electronic copies were what were sold to the investors of the world.
